DETAILED ACTION

Claims 1-9, 11-13 are pending.

The request filed on 12/11/03 for a Continued Examination Application (RCE) under 37 CFR 1.114 based on parent Application No. 09/980965 is acceptable and a RCE has been established. An action on the RCE follows.

Response to Arguments

The applicants have argued the Gilligan et and Gyermek et al reference.

The examiner does not find it convincing.

Applicants claim is drawn to treating pain in general.

Even arrhythmia has a considerable amount of pain associated with it.

The Gilligans reference by itself teaches the compounds and that they are used for treating arrhythmia. Thus in the broadest sense the reference reads on it.

The Gyermek reference clearly teaches the relation ship between the receptors and Pain.

Applicants arguments are not found to be persuasive that the Gyermek reference statement is ambiguous. Examiner disagrees. The reference on the whole teaches 5HT agonists and antagonists with different pharmaceutical uses.

The claims are drawn to treating pain and in need thereof.

The prior art teaches the compounds to treat arrhythmia. The same receptors treat migraine.

Thus one would have found it obvious that to use the compounds to treat pain since both migraine and arrhythmia are both associated with pain.

Art Unit: 1625

Examiner is repeating the rejection in the final rejection.

Applicants claims do not have any reference to the Na channel antagonist mechanism. The specifications teach treating pain related to acute diseases and illness.

The prior art teaches similar compounds to treat migraine and pain. Thus the method of treating is obvious over the prior art.

In re Best Bolton and Shaw, 195 USPQ 430,

Mere recitation of newly-discovered function or property, inherently possessed by things in prior art, does not cause claim drawn to those things to distinguish over prior art; Patent Office can require applicant to prove that subject matter shown to be in prior art does not possess characteristic relied on where it has reason to believe that functional limitation asserted to be critical for establishing novelty in claimed subject matter may be inherent characteristic of prior art; this burden of proof is applicable to product and process claims reasonably considered as possessing allegedly inherent characteristics.

Applicants state that their compounds are Na channel antagonists and they treat migraine and pain. But the prior art has similar compounds and treat the same conditions. It is silent regarding the Na Channel antagonist mechanism, and applicants do not have any side by side showing that the prior art compounds do not have the Na channel antagonist properties. Thus the arguments have not been found to be convincing.

The rejection still stands.

Conclusion

This is a RCE of applicant's earlier Application No. 09/980,965. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the

Art Unit: 1625

grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
